CSS Layer Files

This paper will document how to access layer files. These files are presymbolized data stored on a shared server.

Select **ArcGIS Layers** link from the ADD CONTENT control Navigate to the folder containing the layer files and select the layer.

CSS maintains layer files in two locations. You first have to "map a drive" to these locations in Windows Explorer:

\\10.25.232.163\Geog\sde_layer_files
\\10.90.231.231\gis_data_sde_layer_files

.
